

What We Do: Simplify Enterprise Mobility

AirWatch[®] by VMware[®] is the global leader in enterprise-grade mobility solutions across every device, every operating system and every mobile deployment. Our scalable enterprise mobility management platform integrates with existing enterprise systems and allows you to manage all devices, regardless of type, platform or ownership, from one central console.

Every Mobile Device

Manage any mobile device type, including smartphones, tablets, laptops, desktops, rugged devices, printers and peripherals.

- Smartphones and tablets
- Laptops and desktops
- Rugged devices
- Printers and peripherals

Every Mobile Operating System

Support multiple operating systems including Android[™], Apple[®] iOS, BlackBerry[®], Mac[®] OS and Windows[®] across your organization.

- Android
- Apple iOS
- BlackBerry
- Mac OS
- Windows

Every Mobile Deployment

Enable mobile deployments with multiple device ownership models, including corporate, employee-owned and line of business.

- Corporate: end user and multiuser
- Employee: BYOD
- Line of business: kiosk and shared

Company Differentiators

- 12,000+ customers in 150 countries
- 1,800+ employees across ten offices
- 600+ research and development resources
- Recognized as the industry leader
- Expertise in building enterprise solutions

Product Differentiators

- Common development platform
- Broadest mobility solution set
- Multitenant, highly scalable architecture
- Advanced integration with mobile ecosystem
- Flexible delivery: cloud and on premise

How We Do It: Enterprise Mobility Management Platform

Workspace

AirWatch[®] Workspace provides complete separation of corporate and personal data on a device, ensuring corporate resources are secure and employee privacy is maintained. A secure containerized solution for all enterprise data including email, applications, content and browsing, AirWatch Workspace is managed at the application level without MDM, making it ideal for BYOD and high regulation deployments.

Devices

AirWatch allows you to gain visibility into the devices – including smartphones, tablets and laptops – connecting to your enterprise network, content and resources. Quickly enroll devices in your enterprise environment, update device settings over-the-air and enforce security policies and compliance across your entire device fleet.

Apps

AirWatch enables you to manage internal, public and purchased apps across devices enrolled in your organization. Distribute, update, track and recommend apps with the AirWatch[®] App Catalog. Build custom business apps with the AirWatch[®] Software Development Kit, or wrap existing internal applications for advanced security with AirWatch[®] App Wrapping.

Content

AirWatch secures document distribution and promotes content collaboration anytime, anywhere with AirWatch[®] Secure Content Locker[™]. Access your corporate documents, email attachments and user-generated content in a secure container. Protect sensitive files with user authentication, file encryption, geofencing, sharing limitations and offline viewing restrictions.

Email

AirWatch integrates with your existing email infrastructure to deliver comprehensive security for mobile email. Control device access to corporate email and encrypt sensitive data with AirWatch[®] Secure Email Gateway. Containerize email and provide a consistent user experience with AirWatch[®] Inbox for Android and Apple iOS.

Browsing

AirWatch[®] Browser is a secure browsing alternative to native browsers and provides organizations with the ability to configure customized settings to meet unique business and end-user needs. Define and enforce secure browsing policies for intranet sites without a device-level VPN. Enable secure browsing with whitelists and blacklists or kiosk mode.
